Les géologues, quant à eux, adhèrent en majorité à la théorie de Nieuwenkamp, signalant des sédiments d'argile trouvés près du site [10]. Below is an ordered list of the largest stars currently known by radius. The unit of measurement used is the radius of the Sun (approximately 695,700 km; 432,288 mi).. The exact order of this list is very incomplete, as great uncertainties currently remain, especially when deriving various important parameters used in calculations, such as stellar luminosity and effective temperature.
