Journal of Organic Chemistry

Chitin derived from the seafood wastes such as waste crab, shrimp and lobster shells is abundant and renewable, and the construction of novel polymer materials via physical approaches and green technology from raw chitin is beneficial to the "œgreen development" of our world.

Recent advances in chitin based materials constructed via

RSC Advances is a gold open access journal, offering researchers free access to a broad scope of high quality research articles, and an affordable open access publishing option for authors around the world. The criteria for publication are that the work must be high quality, well conducted and ...

RSC Advances

The physical properties of soils, in order of decreasing importance for ecosystem services such as crop production, are texture, structure, bulk density, porosity, consistency, temperature, colour and resistivity. Soil texture is determined by the relative proportion of the three kinds of soil mineral particles, called soil separates: sand, silt, and clay.

Soil - Wikipedia

The aim of this note is to give you a general introduction to organic chemistry, giving explanations to observed physical and chemical properties of organic compounds.

A mineral is a naturally occurring chemical compound, usually of crystalline form and not produced by life processes. A mineral has one specific chemical composition, whereas a rock can be an aggregate of different minerals or mineraloids. The study of minerals is called mineralogy.. Minerals are classified by variety, species, series and group, in order of increasing generality.

Hierarchical control of two-dimensional (2D) molecular alignment patterns over large areas is essential for designing high-functional organic materials and devices. However, even by the most powerful current methods, dye molecules that discolor and destabilize the materials need to be doped in, complicating the process. We present a dye-free alignment patterning technique, based on a scanning ...

Scanning wave photopolymerization enables dye-free

1. Introduction. Vapor intrusion is the vapor phase migration of volatile contaminants from a subsurface source into overlying buildings or other structures.
