Lachat's QuikChem® 8500 Series 2 Flow Injection Analysis System features high sample throughput and simple but rapid method changeover. The QuikChem Flow Injection Analysis system maximizes productivity in determining ionic species in a variety of sample types, from sub-ppb to percent concentrations.

In analytical chemistry, a calibration curve, also known as a standard curve, is a general method for determining the concentration of a substance in an unknown sample by comparing the unknown to a set of standard samples of known concentration. A calibration curve is one approach to the problem of instrument calibration; other standard approaches may mix the standard into the unknown, giving ...

1. Permeability - is the ability of the rock to allow fluid movement through its interconnected pores. For reservoir analysis, the following terms are derived from permeability: a. effective permeability - is determined for a given fluid at a saturation less than 100 percent and is the fluid conductivity of the porous media at a given saturation where, other fluids
