Color vision is the ability of an organism or machine to distinguish objects based on the wavelengths (or frequencies) of the light they reflect, emit, or transmit. Colors can be measured and quantified in various ways; indeed, a person's perception of colors is a subjective process whereby the brain responds to the stimuli that are produced when incoming light reacts with the several types of ...

A close look at the human body reveals structures that we inherited from distant animal ancestors. Take, for example, the pattern of the bones in our arms—they can be traced back to fossilized fish that lived at the time that life first made the transition from water to land. Other structures that ...
